

ABSTRACT

[0054] A video overlay device of a mobile telecommunication terminal comprises a multiplexer for outputting at least one of a first video data and a second video data; and a video overlay unit for overlaying at least one of the first and second video data with graphic data in accordance with a predetermined ratio. 5 The multiplexer selectively outputs at least one of the first and second video data based on input video selection signals provided by a central processing unit (CPU).
